

NEW! HP STORAGEWORKS X510 DATA VAULT

SMALL BUSINESS INFORMATION TECHNOLOGY SOLUTION

The HP StorageWorks X510 Data Vault series (HP Data Vault) is designed for small businesses with up to 10 PC clients and Macs that need a simple way to protect valuable business data, share files with co-workers and connect remotely. The HP Data Vault provides a comprehensive storage, data protection and file sharing solution for small businesses with limited IT resources and budgets.

The HP Data Vault gives small business owners the flexibility to set up their work environment to best meet their needs and still provide protection of critical data.

The HP Data Vault, based on Microsoft Windows Home Server® operating system software, provides an icon-driven, friendly interface for easy installation and management. It connects directly to the router on your network through an RJ45 Ethernet port and supports up to Gigabit Ethernet speeds. It also supports wired and wireless devices via your wireless router. The HP Data Vault comes with extra bays for internal storage expansion and also offers external USB and eSATA ports for additional external expansion.

For file sharing needs, the HP Data Vault offers both local file sharing and remote file sharing via a custom URL, which is accessible from any web browser. In addition to providing a complete platform to protect, share and connect, the HP Data Vault also offers a variety of applications for managing and streaming business data. Features such as HP Media Collector, HP Photo Publisher,

HP Photo Viewer and others allow you to automatically catalog and share your business data with co-workers and business partners.

In-Box contents:

HP Data Vault
Power cord
Ethernet cable
Software installation disk
PC restore disk
Data Vault recovery disk
Set-up poster and
Support guides

Store It!

- **Easily add more storage**

The HP Data Vault comes in three models with up to 3TB of storage. It can easily expand with any 3.5" SATA I or SATA II hard disk drive and has virtually unlimited external expansion capabilities. The HP Data Vault supports hot swapping of hard disk drives, which means you can add capacity without powering down the device.

- **Organize**

Set up unique folders with all relevant information and allow sharing with business associates locally and remotely. Take advantage of outsourcing opportunities like bookkeeping where a third-party can log on and only see designated information.

- **No monthly fee**

Most online services charge a monthly fee to access files, but with your HP Data Vault, that feature is already built in.

Secure It!

- **Full-system protection**

The HP Data Vault provides complete backup of up to 10 PC clients and Macs. After installing the included client software, the HP Data Vault automatically backs up each client every day.

- **Protect your critical files**

The HP Data Vault lets you choose which file folders are the most important and, with the ease of a mouse click, it will duplicate that folder to a second hard disk drive. If a hard disk drive fails, data will still be safely stored on the second hard disk drive. By selecting the files you want to backup twice, you are able to maximize use of each TB of storage.

- **Easy computer restore**

In case of a PC or Mac failure, getting a computer back up and running is easy with the included computer restore disk. Just insert the restore CD into the optical drive, access the HP Data Vault and select the image to restore.

- **Secure remote access**

To offer ultimate protection, remote access to the HP Data Vault and its applications is conducted through 128-bit secure HTTPS sessions.

- **Restoring files**

Daily backups are browsable and, unlike image backups from other systems, single or multiple files can be selected and copied back to your computer. In addition, users can backup the HP Data Vault itself with Amazon's S3 online backup service.¹

Share It!

- **Local file sharing**

Share files on the local network easily via the HP Data Vault shared folders icon or through the HP Data Vault control panel. Create shared folders based on project, customer or any structure that suits your needs.

- **Remote control**

Windows Home Server[®] gives users the ability to access and share business files remotely, to transfer files to and from the HP Data Vault and to log into their business PCs over the Internet.² You can also access and control PCs that support remote desktop functionality.

- **Work away from the office**

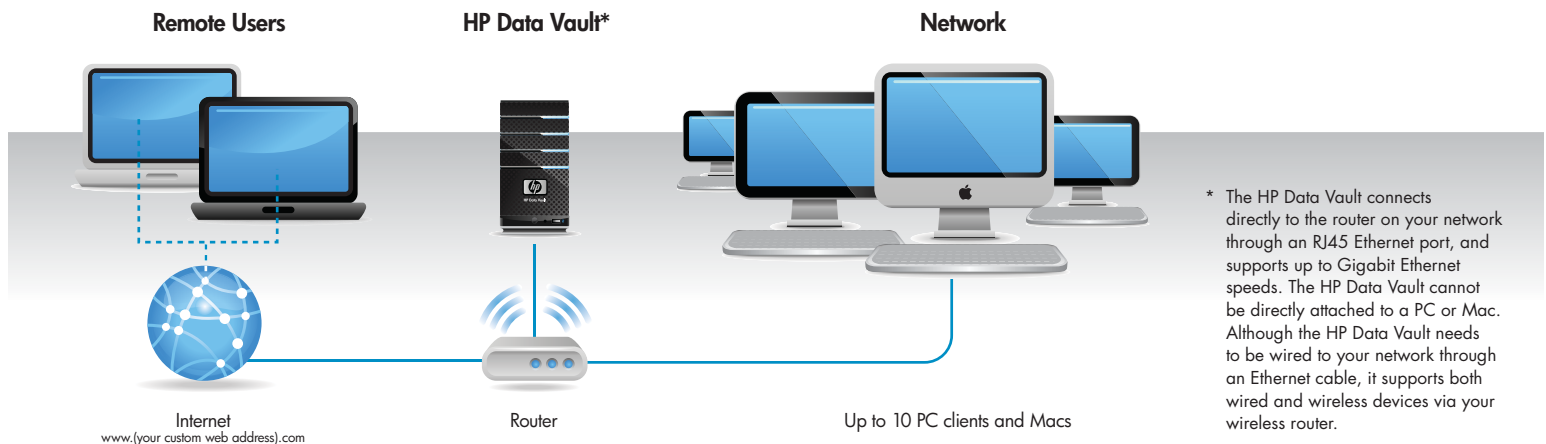

Upon installation, a simple wizard guides you through three options for setting up a secure, personalized web address. Web addresses are registered through HP's partner, TZO.com. Your custom web address is free for the first year and costs a nominal yearly amount after that.

- **User access control**

Easily manage access to shared file folders with just the click of a mouse. Set Read/Write, Read Only or No Access privileges to each shared folder for each user. Users must log in and authenticate to access the HP Data Vault shared folders or PC applications.

1 Amazon S3 Online Backup Service is available on the HP Data Vault as a customer installable add-in.
2 To remotely access PCs, they must be running Windows[®] XP Professional, Windows[®] XP Media Center Edition 2004 or higher, or Windows[®] Vista Ultimate or Windows[®] Vista Business and be connected to the Internet.
